Annual energy consumption (MWh) Scope 1 & 2

Annual GHG emission per scope

- The climate accounts have been prepared by CO₂-Focus. CO₂-Focus has calculated and verified the use of energy and the carbon emissions based on numbers provided by NPRO.
- Development projects and properties with triple net contracts are excluded from the climate reporting.
- The most important factor contributing to the reduction of CO₂-emissions from 2013 to 2014 is the start-up of the energy central at Aker Brygge.
- CO₂ emissions have fallen more than the use of energy. This is due to cleaner energy sources and cleaner Nordic electricity mix.

NPRO's use of energy and emissions are highest within Scope 2, as use of energy and emissions at properties owned by NPRO and rented out are defined as Scope 2. Scope 1 is defined as the company's own direct use and emissions, while Scope 3 are indirect emissions from sources not owned or directly controlled by the entity.
